    yarp_dev_FakeCan --|> yarp_dev_ImplementCanBufferFactory
```

The diagram illustrates the relationships between several classes in the YARP framework. A central class, `yarp::dev::FakeCan`, is shown with a grey background. It has three blue arrows pointing to it from other classes, indicating inheritance or specialization. These classes are `yarp::dev::DeviceDriver` (bottom left), `ICanBus` (middle left), and `yarp::dev::ImplementCanBufferFactory< FakeCanMessage, FCMSG >` (top left). The `ICanBus` and `yarp::dev::DeviceDriver` classes are shown with white backgrounds and black borders. The `yarp::dev::ImplementCanBufferFactory< FakeCanMessage, FCMSG >` class is shown with a white background and a black border, containing the text `yarp::dev::ImplementCanBufferFactory< FakeCanMessage, FCMSG >`.
