

`std::vector< T >`

`yarp::os::Portable`

`iCub::skinDynLib::skinContactList`

```
graph BT; A[iCub::skinDynLib::skinContactList] --> B[std::vector< T >]; A --> C[yarp::os::Portable];
```

The diagram illustrates a relationship where the `iCub::skinDynLib::skinContactList` class (represented in a grey box) inherits from or depends on two other classes: `std::vector< T >` and `yarp::os::Portable` (both in white boxes). Two blue arrows originate from the top of the grey box and point to the bottom of each of the white boxes.
